

MALAMA HAMAKUA

A'ole Hu Honua !

-HU HONU A BIOENERGY PLANS TO SPEW 300,000 TONS OF GREENHOUSE GASSES PER YEAR INTO THE ATMOSPHERE.

-THEY ALSO WANT TO DRAW 21.6 MILLION GALLONS OF COOLING WATER PER DAY FROM THE HAKALAU AQUIFER.

-THEY PLAN TO MIX 30 HAZARDOUS CHEMICALS AND THEN INJECT MILLIONS OF GALLONS OF HEATED WASTEWATER BACK INTO THE GROUNDWATER, ONLY 80 FEET FROM THE CLIFF LINE.

-THE WASTEWATER WILL PERCOLATE OUT OF THE SIDES OF THE CLIFF AND INTO THE OCEAN.

This is the Hu Honua facility, now under construction. They plan to pump 21 million gallons of water per day into cliffs that are unstable and prone to landslides.

600 IMILOA PLACE, HILO**

The endangered Hawksbill sea turtle is found in Hamakua's coastal waters. There is also coral that is actually still flourishing there. Hu Honua plans to release hot water back into the ocean, which will negatively impact both the turtles and the coral.
